

Power of tradition

today

- European quality of Quartz with 10 years guarantee
- Annual collection update reflecting the structure of natural stone
- Easy to work with and to polish
- Collection of 38 popular marble and granite decors
- 2 optimal sizes: standard and jumbo to optimize the manufacturing cost of the final product
- Over 10,000 customers have already chosen Avant Quartz

more than stone

MODERN AND ECOLOGICAL MATERIAL

The main idea of modern design is to turn away from artificiality in favor of pure nature.

Using durable and practical quartz is a great way to show outstanding taste and add a luxurious aesthetic to your surroundings.

Inner beauty of Quartz

Avant Quartz is a Quartz composite made with modern technology. Quartz is an eco-friendly material that combines the best of nature and human craftsmanship. It consists of natural quartz (95%), polymer resins (4%) and color pigments (1%).

The collections are designed as marble and granite motifs. Based on the structure of natural stone - its characteristic stripes and veins - the artists created unique, naturalistic decors. Each Avant Quartz product is original and unique thanks to a wide range of colors, shades, as well as a variety of patterns.

French sophistication for lovers of aesthetics

Each Avant Quartz collection is inspired by a tour of the most beautiful corners of France. By working on the quartz conglomerate decor, the designers sought to reflect the spirit of local architecture and the ability of French craftsmen to give even the most common things a sophisticated finish. This makes quartz stone suitable for both classic and modern interiors: it always becomes an accent that emphasizes the excellent taste of the homeowner.

Avant Quartz is in no way inferior to natural stone but has another advantage: the perfect balance between price and quality.

At the same time, the properties of quartz composite make each product unique, and the quality of the material meets high international standards.

Advantages of the material

Combining design, elegance and practicality, Avant Quartz has many advantages including high scratch and stain resistance. The smoothness of the material makes it easy to maintain hygiene: the absence of pores prevents the accumulation and growth of bacteria. If it gets dirty, it is enough to wash the surface to reveal the pattern in all its glory. With proper use, a quartz product will last for decades.

ENDLESS DESIGN POSSIBILITIES

Size matters

Working with stone for various design elements requires an individual approach. Avant Quartz is produced in standard size - 3050mm x 1440mm - and in Jumbo size - 3200mm x 1600mm. Plate thickness 12 mm, 20 mm and 30 mm.

Wide range of possible applications

The material is widely used to decorate bathrooms, kitchen and bar countertops, sinks and also as flooring.

Certification and security

Avant Quartz is certified for the manufacture of countertops and interior panels. The material is safe for use in the kitchen as well as in rooms with high hygienic and sanitary requirements.
